

The **Celeritas Training Center™** is a tool that allows companies to create, manage, deliver and track customized training materials over the Internet. Customized courses are comprised of a series of videos, presentations and documents along with optional surveys or questionnaires that are targeted at a given damage prevention audience: emergency responders, excavators, public officials and affected public.

The Training Center™ records an individual's progress through the courses by tracking the course materials completed. Once an individual completes a course, the company's administration personnel are notified of the completion and the data is transmitted to an outside application for their records.

**CeleritasWorks™, LLC** is an enterprise-class GIS development company headquartered in Kansas City. In addition to core IT consulting services, Celeritas offers patented and copyrighted web-based solutions aimed specifically at the Underground Damage Prevention marketplace.
